Experience

You Pass Universe – Lead System Developer / Engineer

March 2022 – Present

- Utilized Unreal Blueprints and C++ to implement game mechanics and actor functionality.
- Created and modified 3D blender assets to be imported into unreal.
- Collaborated with the lead designer to create a virtual world space, and with backend developers to implement peer-to-peer networking.
- System pipeline integration via Perforce, Nextcloud, Fossil, and OpenProject.

One Dawn Studios – Gameplay Programmer

April 2020 – November 2020

- Worked on a Hybrid ECS solution in tandem with a Unity environment to produce highly optimized code.
- Coded combat mechanics and UI functionality.
- Collaborated with Designers to develop and improve gameplay systems during the development process.

Drillbit Studios – Game Programmer

March 2019 – May 2020

- Developed tools that allowed the team members to add in-game objectives using specified parameters easily.
- Collaborated with designers to design progression and monetization systems.
- Scripted gameplay system and UI functionality, including menu transitions, camera movement, menu animations, etc.
- Performed bug-fixing throughout the process of development.
